

# UNLOCK YOUR WAREHOUSE POTENTIAL

with Inhance's Warehouse Management System.

Our cutting-edge **WMS** transforms your warehouse operations, bringing unparalleled efficiency, visibility, and control.

# Understanding Warehouse Management Systems (WMS)

**At the heart of every successful business that deals with physical goods, there's a bustling hub of operations, a warehouse.**

**Managing a warehouse, however, is no simple task. It involves a complex dance of incoming and outgoing goods, intricate tracking of inventory, proficient labor management, and so much more. This is where a Warehouse Management System (WMS) takes center stage.**

At its core, a WMS is a sophisticated software solution that empowers businesses to manage and control their warehouse operations effectively. From the second goods arrive in your warehouse until they're shipped out, a WMS orchestrates the entire process.

It is specifically designed to handle a multitude of tasks that once demanded tedious manual labor, extensive paperwork and lots of managerial oversight. Today, with just a few clicks, businesses can have an eagle-eye view of their entire warehouse operations, thanks to advanced WMS solutions.

## **But how does this translate to your business needs, particularly if you're unfamiliar with WMS?**

Imagine having a single command hub, where you can monitor, effectively manage, and optimise every single aspect of your warehouse operations, all in realtime.

That's the powerful capability that a WMS provides. It's the silent workhorse that keeps your warehouse running smoothly and efficiently.

From small operations to large, multi-site enterprises, businesses across the spectrum leverage WMS's to modernise their processes and ensure their warehouse operations are as effective and efficient as possible.

A WMS is more than a tool — it's your strategic ally, designed to transform your warehouse, optimise your supply chain, and ultimately, accelerate your business success. In a rapidly evolving digital era, a WMS is your key to unlocking an efficient, future-proofed warehouse.

“

Our system optimisation allows the seamless placement of items on their designated benches and storage locations, spanning multiple products and batches in a lot-controlled environment. With batch control storage and allocation based on status, managing goods within the warehouse has never been more effortless.

Waldo van der Walt, General Manager at Globepak

# Introducing the Inhance Warehouse Management System

Simplifying Complexities for Optimal Warehouse Efficiency

Inhance's Warehouse Management System (WMS) is your strategic partner in streamlining warehouse operations and distribution centres, providing you with essential tools for superior management. Harness the power and convenience of our user-friendly WMS, designed to enhance productivity and reduce manual workload.

By automating laborious tasks and minimising costly errors, your operations become more efficient and precise.

With integrated Barcode scanning and Imaging technology, we empower you to elevate your warehouse productivity, improve inventory accuracy, strengthen stock traceability, and ultimately, enhance your customer service experience.

Our solution operates on a cloud-based platform, offering effortless integration with your existing Business and Supply Chain systems. This enables a cost-effective deployment of superior Warehouse Management across your entire distribution network, bringing consistency and control to your fingertips. Experience the Inhance difference today.

## OUR WMS SOLUTION SUPPORTS ALL KEY WAREHOUSING FUNCTIONS

# Benefits of Using Inhance's Warehouse Management System

## Optimised Inventory Control

Gain real-time accuracy and visibility of your inventory, boosting your planning capabilities and reducing risks of stockouts or overstocking. With full batch traceability and sophisticated shelf life management, maintain superior control over your products' lifecycles. This empowers you to make informed decisions and deliver accurate, timely information to your customers.

## Streamline Warehouse Operations

Our WMS automates and optimises key warehouse processes from receiving to shipping. Enhance speed, reduce errors, and save costs while improving your overall customer service.

## Effective Labor Management

Track worker performance, optimally schedule tasks, and balance workloads to boost productivity and cut labour costs. Safeguard your staff by directing them along optimal routes within your warehouse.

## Seamless Scalability

Our WMS grows with your business. Effortlessly accommodate increased volume, additional SKUs, or more complex operations without a drop in efficiency or accuracy.

## Improved Customer Service

Increase operational efficiency and accuracy to significantly improve customer service. Process orders faster and with higher accuracy, resulting in quicker delivery times, fewer errors, and enhanced customer satisfaction.

## Informed Decision Making

Leverage the data generated by our WMS for insightful analytics and reporting. Make strategic decisions based on throughput times, labour efficiency, or inventory turnover, and proactively address potential issues.

## Significant Cost Savings

Our WMS delivers significant cost savings by improving efficiency, accuracy, and visibility in your warehouse operations, reducing costs associated with labour, inventory holding, lost or damaged stock, and inefficient processes.

By adopting Inhance's WMS, you can expect streamlined operations, real-time inventory visibility, improved workforce productivity, reduced operational costs, and a high ROI.

## Key Features

Advanced Inventory Management

Electronic Receiving & Put-away

Robust Order Fulfillment Strategies

Optimised Picking and Packing

Automation & Workflow Management

Advanced Dashboarding & Analytics

Scalable Architecture

Seamless Integration Capabilities
